

***Group: Jonatan Goldbach, Nasibullah Nasiri, Felix Evers (Group 30)***

***The Problem:***

***The harvest is being lost due to frost, inaccurate weather data, and competition from other markets.***

---

***Round 1:***

- ***Idea 1:*** Use technology that tracks frost in real-time, so we can protect the crops.
  - ***Idea 2:*** Partner with weather experts to get better forecasts.
  - ***Idea 3:*** Plant apple varieties that are stronger and can survive cold weather.
- 

***Round 2:***

- ***Idea 1:*** Install smart irrigation systems that save water by only using it when needed.
  - ***Idea 2:*** Market local apples as high-quality to stand out from cheaper imports.
  - ***Idea 3:*** Use drones to check for insects and apply pesticides only where necessary.
- 

***Round 3:***

- ***Idea 1:*** Use renewable energy like solar panels or wind to heat the farm when it's cold.
  - ***Idea 2:*** Form a group with other farmers to reduce costs and compete with larger companies.
  - ***Idea 3:*** Use organic pesticides that protect the crops without harming the environment.
- 

***Round 4:***

- ***Idea 1:*** Use artificial intelligence to predict frost and plan the harvest ahead of time.
  - ***Idea 2:*** Apply for government grants that support eco-friendly farming.
  - ***Idea 3:*** Train farmers to use water and energy efficiently to reduce waste.
-

This version cuts out unnecessary details and makes the solutions easy to understand and implement.
